

Chip Beads (SMD Array) – MZA3216 Series

Features: • A single MZA series chip provides noise attenuation for four lines, making it ideal for use with I/O lines of various highly miniaturized devices • Low crosstalk between adjacent circuits • Internal electrodes feature low DC resistance, minimizing wasteful power consumption • Electroplated terminal electrodes accommodate reflow soldering • Monolithic structure ensures high reliability • Contains no lead and also supports lead-free soldering

Operating Temperature Range: -55°C – 125°C

Applications: • Computers • Printers • VCRs • Televisions • Portable telephones • Electronic equipment, such as portable products, which comprise high density circuitry

S Material: For signal line applications in which the blocking region is near 100MHz.

Y Material: High frequency range type intended for the 100MHz region and above. For signal line applications in which the signal frequency is far from the cutoff frequency.

* For Tape and Reel part number, change 1-ND to 2-ND.

Ferrite Beads / SMD

MMZ – Digital Signal Line Application MPZ – Power Supply Line Application

MATERIAL CHARACTERISTICS:

A Material: This high-impedance product is based on the impedance frequency characteristics of our Y-material. The product offers excellent impedance characteristics, which is greater than 250Ω, in the vicinity of 100MHz range (MMZ1608A252B).

B Material: This type is perfectly suited for fast digital signals. By equalizing R components and X components that beads possess at a frequency of 5MHz, it is able to suppress overshooting, undershooting and ringing of fast digital signals.

D Material: For applications calling for low insertion loss at low frequencies and sharply increasing impedance at high frequencies. Designed for high impedance at high frequencies (200 – 500MHz) for signal line applications.

F Material: This new product inherits the characteristic of the D Material, namely its sharp impedance rise time, and its impedance peak frequency has been shifted higher into range. The product offers excellent noise suppression from 600MHz to as high as in the GHz range.

R Material: For digital signal line applications.

S Material: For signal line applications in which the blocking region is near 100MHz.

Y Material: High frequency range type intended for the 100MHz region and above. For signal line applications in which the signal frequency is far from the cutoff frequency.
