Current Sensors

Remote Current Indicators — Model 18-600

CR Magnetics Remote Electrical Current Indicators provides an effective method for remote monitoring of electrical current. When the current exceeds the turn-on point of the sensing transformer, the LED illuminates to indicate the presence of current.

Specifications: • Indicating Range: 2.5 - 100 Amps (1-Wire Pass) • Minimum turn-on point: 2.5 Amps • Maximum Cont. Current: 100 Amps

Digi-Key Part No.	1	Price Each	25	CR Magnetics Part No.

Transducers/Transmitters

CR4100 Series: Designed for applications where AC current waveforms are not purely sinusoidal. These devices are ideal in chopped wave and phase fired control systems.

CR4210 Series: Calibrated to provide a 0-5VDC and 0-10VDC signal that is proportional to the average RMS input AC current.

CR4200 Series: Produces a calibrated 4-20mADC signal that is proportional to the average RMS input AC current. The output signal is generated from a user supplied 24VDC power supply within the output current loop.

CR4400 Series: Designed to provide a DC output proportional to the AC current input.

CR5200 Series: Designed to provide a DC signal which is proportional to a DC sensed current. The ranges 2-10 Amp utilize an advanced Magnetic Modulator technology and the ranges 20 Amps and above utilize Hall Effect technology.

CR4500 Series: Designed for applications where AC voltage waveforms are not purely sinusoidal

CR5300 Series: Designed to provide an output DC signal that is proportional to the input DC voltage.

CR6600 Series: Designed to give a DC output that is proportional to an input frequency value.

Sensors

CR4395 Series: Current Sensing Relay that provides an effective and highly stable method for monitoring electrical current. The current-carrying wire is routed through the opening extending from the top of the case. When current reaches the level set by the trip point adjustment, the relay trips and starts the adjustable timer. After the timer cycles the electromechanical relay is energized.

CR5395 Series: Direct Current Sensing Relay that provides a precision and cost effective method for monitoring direct current. Magnetic Modulator Technology is utilized for the current sensing to provide a stable and highly repeatable current

trip. The current-carrying wire is routed through the opening extending from the top of the case. When current reaches the level set by the trip point adjustment, the relay trips and starts the adjustable timer. After the timer cycles the electromechanical relay is energized.

CR7310 Series: Ground Fault Sensor that provides a reliable and cost effective method for sensing ground faults. The current-carrying wires are routed through the opening extending from the top of the case. When ground current reaches the level set by the trip point adjustment, the relay trips, illuminates the tripped LED and provides an output signal.

TRIP STATUS:

EH: Energized on High, trips when sense current is above trip point and returns to non-trip status when sense current is below the trip point.

EL: Energized on Low, trips when sense current is below trip point and returns to non-trip status when sense current is above the trip point.

Open Loop Current Sensors Hall Effect Technology

A hall effect current sensor measures the magnetic flux which is produced proportionally to the current without any contact with the primary circuit. This results in no voltage drop in the measured circuit which provide excellent galvanic isolation. **Features:** • Galvanic isolation between primary and measuring circuit, measures DC or AC (kHz) • Zero insertion loss • Quick response **Specifications** (measured at Input Voltage and @ 25°): • Frequency Band Width (-3dB): L01Z, L03S, L08P, L18P: DC-50kHz; L07P: DC-35kHz • Output Linearity: ±1% • Operating Temperature: -10°C - 80°C • Insulation Resistance @ 500VDC: ≥500MΩ - di/dt • Response Time: 5μs Sec. Typ. (10μ for L08P Series) • Load Resistor: 10kΩ 3mW minimum.

Closed Loop Multi-range Current Sensors

Closed loop (compensated) current sensor provides an exact duplication of the primary current scaled by the number of turns in the secondary coil. Each multi-range sensor has a nominal sensing current but can be changed by configuring the primary pins. The sensing current can be scaled down by 1/2 or 1/3 the nominal output sensing current, which gives you the flexibility to sense 3 different current ranges with only one part.

Specifications (measured at input voltage and 25°C): • Frequency Bandwidth S22P(1dB): DC-200kHz (at higher frequencies derating is required to prevent core from overheating) • Output Linearity: ±0.25% • Operating Temperature: -10°C - 85°C • Insulation Resistance @ 500VDC: ≥ 500MΩ • Response Time: 1μSec. • Load Resistor 10kΩ 3mW Minimum

Current Transformer Standard Accuracy Low-Cost 50/60 Hz

Applications:

- Sensing current overload
- Ground fault detection
- Metering

Notes:

- RCF: Ratio Correction Factor. Multiply current readings by this factor to compensate for transformer losses.
- Data is deemed reliable at the time of publication, but may be subject to change without notice.
