PAX LITE Process Time Meter

The PAX Lite Process Time Meter, Model PAXLPT, displays a value representing the time between a beginning and end point of a process, such as a conveyor oven. The PAXLPT's display will update inversely in relation to the input signal frequency. As input frequency increases (representing speed), the PAXLPT time display will decrease indicating a reduction in the duration of process time. For example, the bake time through an oven will decrease the faster the conveyor runs. The display can be programmed for two operating modes. Operating in the 6 digit mode, the PAXLPT can readout in any whole value, such as seconds, minutes or hours. This mode also provides capability for decimal points. The 5 digit mode functions as a chronometer, which has a maximum display value of 999.59. This formats the display to allow the meter to readout in hours and minutes, minutes and seconds, etc.

Specifications: • AC Power: 115/230VAC, switch selectable, 50/60 Hz • DC Power: 10 – 16VDC @ 0.1 A maximum • Keypad: 3 programming keys • Input: DIP switch selectable; accepts pulses from a variety of sources including NPN-OC, PNP-OC, TTL Outputs, Magnetic Pickups and all standard Red Lion sensors. • Maximum input voltage: \pm 40 V peak, 30 Vrms • Input Frequency Range: • Maximum frequency: 25 kHz • Minimum frequency: 0.05 Hz • Accuracy: \pm 0.02% • Memory: Nonvolatile E2PROM retains all programmable parameters. • Operating Temperature: 0°C – 60°C
